

Tour Quality Impact

Training Setup

Place a tour stick in the ground at the angle where you would setup with your driver. Then, place your ball about 20 inches to the right of the tour stick.

Solid Impact

This drill forces your hands to stay underneath the shaft so you drive the ball under the tour stick. You will keep your club down and accelerate through impact.

Incorrect Form

Your pitch shot is incorrect if the ball travels above the tour stick. This means you were lifting the golf club as you pitched the ball.
